

GOVERNMENT AGENCIES MUST PUT AN IMMEDIATE STOP TO THE CONTINUED QUARRYING ACTIVITIES IN CORON

We represent concerned citizens and residents of Coron, Northern Palawan.

We are concerned that quarrying and reclamation activities have been undertaken in Coron without letup despite the absence of environmental assessments, other pertinent permits, and the absence of extensive consultations among Coron residents.

We demand to know if all these quarrying activities were issued Environmental Compliance Certificates (ECCs) by the DENR. If so, we demand that the DENR conduct an immediate review of these ECCs in light of the serious environmental damage that such quarrying and reclamation have caused and order the immediate stoppage of these activities.

Coron residents are not aware on the use of these quarry materials and whether the so-called infrastructure development projects are based on an updated comprehensive land use plan, annual development plan and annual investment plan. Our Constitution, the Local Government Code and various environmental laws provide for participatory processes in the pursuit of development projects. Sadly, we do not see the implementation of these policies and laws in Coron.

Hills and mountains have been demolished because of quarrying activities and the harmful impacts have already been experienced by Coron residents. Siltation has occurred in our mangrove and coral reef areas. Mangroves that support sustainable coastal and marine ecosystems were destroyed because of the reclamation activities. The pollutive dust generated by such quarrying and reclamation activities have endangered the health and safety of Coron residents. Extractive and infrastructure development activities have resulted to the flooding of the town.

Clearly, these so-called infrastructure development and related activities have threatened the only natural resources and environmental assets that Coron has, and which have provided livelihood opportunities to its community. We regret that Coron's political stewards have allowed these destructive projects to continue. Concerns on the possibility of bribery need to be investigated.

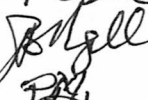

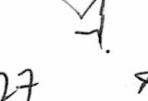

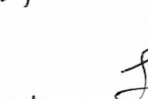

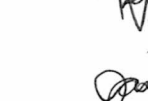

We assert that quarrying and reclamation activities have to stop and a comprehensive study must be done to determine the need and appropriateness for such quarrying and reclamation activities.

As a steward of our resources, we compel government agencies to uphold our rights to healthful and balanced ecology and implement whatever is necessary in order to stop the further destruction of our mountains and coastal areas.
