

Asian Road Crash Analysis for Future Vehicle Technology Workshop

February 24, 2022 (Thursday), 1:00 PM – 4:30 PM (PHT)

An increasingly important goal in road traffic safety is the reduction of fatalities in road traffic incidents. Interventions toward safer roads are multi-faceted and include education, better enforcement and engineering solutions.

A necessary ingredient in crafting interventions are data and evidences on road incidences: which types of incidences occur frequently, the patterns as to why these incidences occur, which classes of vehicles are usually involved, among others.

The webinar will discuss the road incident analyses of two countries, namely the Philippines and Malaysia, and will identify possible interventions that hopefully will lead to a significant reduction of fatalities coming from these incidents.
