

Technologies/Infrastructures for Public Transportation Smart Mobility

February 11, 2022 – 9:00 AM – 5:00 PM

The use of information and communications technologies/infrastructures is seen as an enabler for nations to achieve digital transformation in the delivery of basic services. It is for this reason that the Philippine Government is embarking on digital transformation in the transport sector using different advanced technologies and infrastructures in order to improve mobility, connectivity and safety of Filipinos.

Intelligent Transportation System (ITS) through the application of information and communication technologies has the potential to improve the movement of people and goods, road users' safety, air quality and fuel efficiency. It is very important to have an ITS Master Plan which will provide a framework for determining the country's future ITS needs.

The webinar will discuss the current developments in ITS in the Philippines and introduce the different technologies/infrastructure for public transportation smart mobility.
