

Name of Protected Area: **Marinduque Wildlife Sanctuary**

Name of PAMB : **MWS-PAMB**

First Semester of Calendar Year **2022**

Contents

1. Introduction
2. Proposed Management Intervention
3. Important Observation
4. Finding Per BMS Method
 - 4.1 Summary of Field Data 1st Quarter Year 2022
 - 4.2 Summary of Photo Documentation Data 1st Quarter Year 2022
 - 4.3 Summary of Transect Data 1st Quarter Year 2022
 - 4.4 Summary Focus Group Discussion data 1st Quarter Year 2022

1. Introduction

The Biodiversity Monitoring System (BMS) aims to improve the information available for decision-makers in protected areas through the regular collection of data on natural biological resources and their utilization, the focus is on identifying trends in biodiversity and its use to guide action in PA management. In addition, the BMS intends to improve the participation of the Community Monitoring Group (CMG) and other stakeholder in protected area communities in the management of the Marinduque Wildlife Sanctuary (MWS).

The BMS includes four methods:

1. The Focus Group Discussion (FGD)

This method was held semi-annually in one site. It generates information regarding trends of the following: a) use of resources, in status of selected resources, and of status of household or stakeholders benefiting from the use of resources. The information is mainly based on the perception of the individual members of the Community Monitoring Group (CMG). The data's gathered from a number of stakeholders in the community can provide a valid foresight of general trends.

The Focus Group Discussion (FGD) was held on February 17, 2022 at around 5:30 p.m. to 8:00 in the evening at So. Tawang, Tambangan, Sta. Cruz,
