With the implementation of the LAWIN Forest and Biodiversity Protection System, respectfully submitted is the detailed report of the Busuanga Pasture Reserve Management Office (BPRMO) on the results of the LAWIN monitoring and patrolling activity conducted in the Municipalities of Coron and Busuanga, Palawan within the BPR area for the month of October 2022.

### I. Findings and Result

Two (2) Patrol Teams were dispatched during the conduct of this activity within the Forest Conservation Area (FCA) of BPR situated in the Municipalities of Coron and Busuanga, Palawan. The target distance for the month of October 2022 is 30 kilometers (km) based on the LAWIN Patrol Plan for the 4<sup>th</sup> Quarter of 2022. On the said month, the BPRMO Patrol Teams were able to traverse an aggregate distance of 32.43 km or 108.1 % (Table 1).

Table 1. BPRMO LAWIN monitoring and patrolling accomplishment for October 2022

Month	Target (km)	Accomplishment (km)	Difference (km)	Accomplishment (%)
October	30	32.43	(2.43)	108.1

*\*The accomplishment rate is computed based on the 30 kilometer target per CENRO/CA per month compared to the sum of the distance patrolled per CENRO/CA.*

Table 2 shows a total of 496 Forest Condition Counts (FCCs) recorded during the patrolling. Early Secondary Forest (ESF) appears to have the highest figure recorded for October 22, 2022 with 200 counts or 40%, while Old Growth Forest (OGF) has the least recorded observation with 17 counts or 3%. The remaining forest conditions such as Open-Cultivated (OC), Advanced Secondary Forest (ASF), and Open-Uncultivated (OUC) with corresponding total figures of 56 (11%), 94 (19%), and 129 (26%), respectively. Based on the SMART analysis, the total FC with the good condition has a total count of 311 or 62.7% which includes OGF, ASF, and ESF.

Table 2. Patrol Observation: Forest Condition Counts

Forest Condition											
OGF		ASF		ESF		OUC		OC		Total	
Count	%	Count	%	Count	%	Count	%	Count	%	Count	%

OGF-Old Growth Forest. ASF-Advance Secondary Forest. ESF-Early Secondary Forest. OUC-Open, Un-cultivated. OC-Open, Cultivated

For the presence of natural regenerants, 323 FCCs or 65% of the total FCC was recorded with the presence of natural regenerants while 173 FCCs or 35% were with the absence of natural regenerants. There were eleven (11) or 2% recorded dense natural regenerants, while one hundred seventy-five (175) FCCs or 35% and one hundred thirty-seven (137) or 27% recorded as moderate and sparse natural regenerants, respectively (Table 3).

Table 4 shows the observed and recorded threats within the FCA of BPR. A total of eleven (11) threats were observed and recorded during the LAWIN Patrolling for the month of October 2022 and this was accounted for eight (8) under tree cutting; one (1) for huts or houses and other infrastructures; and lastly two (2) for slash and burn farming (kaingin).

Table 4. Patrol Observation: Threat Count

Threats	No. of observation
Cutting of trees	8
Huts or Houses and other Infrastructures	1
Slash and burn farming	2
<b>Total</b>	<b>11</b>

As can be viewed from the map in Annex C, the threats observed/documented in the FCA during the month of October 2022 were found in the Barangays of Decalachao, Bintuan, and Guadalupe, Coron, and Brgy. Quezon, Busuanga, Palawan. The current threat index was computed as 0.12 threats per kilometer (T/Km) in January 2022, up to 0.21 T/Km in the month

of March 2022, down to 0.03 T/km in April 2022 up to 0.26 T/Km for the month of June. The highest recorded was 0.40 T/km for the month of July, down to 0.06 on August, increased to 0.19 on September 2022 and increased again to 0.34 this October 2022. On the other hand, there are no threats recorded in the month of February 2022 and May 2022.

## **Forest Protection Effectiveness Report**

### **Region 04B - BPR**

Number of days analyzed: 304

Oct 26, 2022 9:38 AM

This reports presents trends in observations of forest condition, regeneration, threats and indicator species. The combined presentation allows for an evaluation if protection efforts are effective, conservation targets are met and the forest achieves the desired future forest condition. Protection efforts are effective, when records of forest condition, regeneration and indicator species show an upward trend towards more observations more and denser regeneration, particularly in degraded forest areas. Increasing trends in indicator species suggest that the improved forest condition is providing a better habitat for forest dependent species. All trends presented are put in relation to the patrol effort to provide comparability. Forest cover data were derived from 2003 and 2010 NAMRIA land cover maps.
