MEMORANDUM

FOR : The In-Charge of the Office
PENRO Romblon

FROM : The NGP Coordinator
Odiongan, Romblon

SUBJECT : **SUBMISSION OF MEDIUM-TERM ACCOMPLISHMENT REPORT
COVERING THE PERIOD OF CY 2017-MAY 2022**

In compliance to the Memorandum of the Regional Executive Director dated May 30, 2022, the undersigned prepared the requested information relative to the above-mentioned subject.

After 6 years of NGP implementation since 2017, with the technical assistance and supervision of PENRO Romblon and through the partnerships between POs, local government units and family contractors, the province were able to plant and rehabilitate an aggregate area of 603 hectares. These are comprised of various commodities with 289 hectares timber/ indigenous species, 120 hectares of fruit trees, 51 hectares of high value crops, 10 hectares of mangrove, 100 hectares of bamboo and 33 hectares of hedgerows. The PENRO has no target on the comprehensive site development for calendar year 2019, 2020 and 2022.

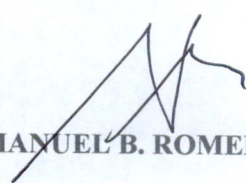

The status of established plantations on 2017 and 2018 are already graduated with rated survival of 55% and 52%, respectively, based on the final performance evaluation and assessment as conducted in the sites after 3 years of project implementation period. Thus, initiatives such as tree planting activity is very helpful as a strategy to improve and maintain those completed areas. Meanwhile, 2021 established plantations are currently on its second year implementation of maintenance and protection activities which directly implemented by the administration of DENR Romblon.

Throughout the implementation period, most of the challenges encountered are the following:

- 1) Complex preparation of necessary documents to enter into NGP Contracts that requires additional fees which quite expensive and burden to the partners. Other partners have no choice but to borrow some money to pay for the said fees. This was also cause on the delay execution of scheduled activities;
- 2) Unpredictable weather conditions that affects the timing of planting period and the attainment of ideal survival rate of the plantations;
- 3) After 3-year implementation period, no assurance if the NGP area are still in good conditions and if performed of atleast 85% survival rate, since no allotted budget for the hiring of additional Forestry Extension Officers to monitor the actual status of the established plantations when the project is already graduated.

In view of the above, the NGP Unit still ensures to continue to perform better, following the essential measures in achieving goals to reach the key indicators of the program. Enclosed herewith is the filled-out matrix and some geotagged photos of established plantations in 2017, 2018 and 2021 with generated maps of the sites.

For information, appropriate action and further instructions, if any.

MANUEL B. ROMERO
