Forest Protection Effectiveness Report

SUMMARY PATROL REPORT

Summary Patrol Report		
Region 04B - Taytay		
Number of days analyzed:	28	15 Nov 2022 2:17 PM
This report presents the patrol performance and quality of the implementing unit during the above stated period of time (number of days). The report contains information on accomplishment rate, coverage and intensity of patrolling in different forest types on patrol distance covered per patroller. The information is meant to provide a basis for patrol planning for the next planning period and implementation of adaptive measures to enhance patrolling as necessary.		
Overall accomplishment rate*		
Level of Accomplishment	Accomplishment* for the period	Target* distance for the period
	3.42	236.25
	Accomplishment Rate: 1.45%	
*Target is computed based on 10km target per team of 4 DENR patrollers per month		
Patrol coverage and intensity

Forest Protection Effectiveness Report

Region 04B - Taytay

Number of days analyzed:

28

15 Nov 2022 2:14 PM

This reports presents trends in observations of forest condition, regeneration, threats and indicator species. The combined presentation allows for an evaluation if protection efforts are effective, conservation targets are met and the forest achieves the desired future forest condition. Protection efforts are effective, when records of forest condition, regeneration and indicator species show an upward trend towards more observations more and denser regeneration, particularly in degraded forest areas. Increasing trends in indicator species suggest that the improved forest condition is providing a better habitat for forest dependent species. All trends presented are put in relation to the patrol effort to provide comparability. Forest cover data were derived from 2003 and 2010 NAMRIA land cover maps.

Trends of Observations per Patrol Kilometer in the Forest Conservation Area

Trend in Threats

A decreasing trend in threats in the forest conservation area mean effective forest protection; an increasing trend means the opposite.

Trend in Indicator Species

An increasing trend in indicator species in the forest conservation area means effective forest protection; a decreasing trend means the opposite.

Trends in Regeneration Density

An increasing trend in regeneration means effective forest protection; a decreasing trend means the opposite.

Trends of most common Threats
