RATTAN HARVESTING PLAN

I. BACKGROUND

The name 'Rattan' is derived from Malayan word 'rotan' which means climbing palm. Rattan is a multi-purpose plant resource with long tough slender stems found mostly in the tropical rainforests, and has a high economic value which can be considered as a material with high potential in the construction industry.

Rattans are naturally found in the Philippine dipterocarp forests and are distributed throughout the country.

Local uses of rattans include the production of mats, baskets, fish traps, dyes, and medicines, while for the international market, rattans are mostly used in the production of cane furniture.

II. RATTAN UTILIZATION

The utilization of forest products is existing within the CBFM area is one of the privileges granted to the POs. The Resource Use Permit (RUP) is required to harvest some forest products found therein in a sustainable manner. Rattan harvesting is one of the promising enterprise which the PO could resort. The demand of products made from Rattan is very much in demand locally and abroad. It will create jobs not only in the community but also in the manufacturing and handling process. However, proper inventory must be done to ensure that the given quota does not exhaust yield or to prevent over harvesting of the resource. Moreover, it should be in accordance with Resource Use Permit and subject to proper monitoring by the DENR once the Community Resource Management Framework (CRMF) and Five Year Work Plan (FYWP) of the PO was being approved and affirmed.

1.1 The Commodity or Product

Rattan thrives well in forested areas under canopy of large trees. The branches of trees serve as support because this is a thorny climbing palm sometimes growing to a length of 20-25 meters. When mature, the poles are gathered and are generally used in the manufacture of baskets, chairs, and other furniture for sale locally and abroad. There are plenty of Rattan poles with varied sizes ranging from less than 2 cm up to 3 cm depending upon the sizes. If given a Resources Use Permit, the economic value of the product will be gained and will provide sustainable livelihood and income for the organization while the government will accrue revenues from the charges and fees. Jobs will be created in the manufacturing process and marketing.

1.2 Methods of Harvesting/Gathering of Rattan

The usual procedure of harvesting Rattan is the manual method. The use of machinery or equipment is not required. The first stage is cutting the stem and debarking then pulling down to the ground. It will be cut into standard length for two (2) cm and larger poles, 2 meters long while for smaller sizes, it depends on the market requirement. Rattan poles are usually cut by the gatherers, who is actually go into the forest, cut the rattan, then bundled and bring it down from the mountain to the stockyard.

The gatherers paid according to the number of pieces of rattan brought to the stockyard. The price depends upon the species, diameter and length. However, harvesting of poles may vary depending on the climatic conditions, soil type, canopy opening and spacing.

Harvesting Rattan in the Philippines is generally done during the dry season. From late May to November or December, rattan gathering slows down or even stops except for gatherers who do not have other source of livelihood.

Before shipping, the poles will be sun dried or cured to prevent fungi attack which causes discoloration. Culms shorter than five (5) meters will not allowed to be cut. Moreover, it has no economic value.

Based on the inventory conducted by personnel of DENR-CENRO Quezon within the CBFM area of TMPA various species of Rattan abounds such as Palasan pula, Culape, Bogtong, Labsikan and Limuran. While, Abuan, Arorog, Sic-sic, Sika, Gatasan and Tumalin on the small sizes are very abundant.

1.3 Environmental Impact

The harvesting of Rattan does not pose any environmental hazard. No machinery or chemicals are involved in the operation. Moreover, cutting of immature poles is not economically feasible and therefore, sustainability is ensured. Cutting of trees is not allowed. Debris and waste materials will be contained in a certain place so as not clog or contaminate rivers and creeks.

1.4 Area of Operation

The rattan plantation is located within the CBFMA area of Tagbisay Multi-Purpose Association (TMPA) scattered particularly in Barangay Dumanguena, Narra, Palawan.

1.5 Proposed Activities on Project Management and Marketing

Rattan gatherers shall be under direct supervision of the PO who shall keep a record of quantity delivered by each individual. A bodega or storage house shall be constructed for stocking so that the collected Rattan will not be exposed to the rain. The PO shall make a record the quality and quantity of Rattan brought to him/her by the gatherer that will serve to determine the amount of money to be paid to each gatherer. The Treasurer of the PO shall receive payment from the buyer and issue official receipt. The Officer of PO thru the President shall be responsible to transact buyers and shall determine the optimum price most and advantageous to the association and gatherers on cash basis.

Currently, there are several buyers of Rattan in Narra, Palawan and Puerto Princesa City, Palawan. All forest charges and local regulatory fees will be paid and corresponding transport documents from the DENR shall be secured first before the transport of Rattan from Bodega to any point. Shipment will be done at least monthly or depending on the availability of stock.

A royalty fee of one peso (PHP 1.00) shall be retained to the PO for every pole of Rattan which will go to General Fund of the association and must be deposited in the Bank Account. The General Assembly will decide where to use the accumulated fund at year end in accordance with the approved plan or activities.

1.6 Sustainability and Continuity of the Project

Records should be intact for transparency, control and monitoring purposes. Whenever a problem or issues arise, the officer should convene to resolve the matter. If they cannot resolve the issue among themselves, the assigned DENR CBFM-Desk Officer shall mediate or intervene. The renewal of Resource Use Permit for Rattan resources will be done annually before its expiration to ensure continuity of the enterprise.

To ensure the sustainability and continuity of the project the PO prepared the projected income statements for one (1) year operation of rattan gathering and trading (*see attached Table No.*).

RATTAN HARVESTING PLAN

I. BACKGROUND

The name 'Rattan' is derived from Malayan word 'rotan' which means climbing palm. Rattan is a multi-purpose plant resource with long tough slender stems found mostly in the tropical rainforests, and has a high economic value which can be considered as a material with high potential in the construction industry.

Rattans are naturally found in the Philippine dipterocarp forests and are distributed throughout the country.

Local uses of rattans include the production of mats, baskets, fish traps, dyes, and medicines, while for the international market, rattans are mostly used in the production of cane furniture.

II. RATTAN UTILIZATION

The utilization of forest products is existing within the CBFM area is one of the privileges granted to the POs. The Resource Use Permit (RUP) is required to harvest some forest products found therein in a sustainable manner. Rattan harvesting is one of the promising enterprise which the PO could resort. The demand of products made from Rattan is very much in demand locally and abroad. It will create jobs not only in the community but also in the manufacturing and handling process. However, proper inventory must be done to ensure that the given quota does not exhaust yield or to prevent over harvesting of the resource. Moreover, it should be in accordance with Resource Use Permit and subject to proper monitoring by the DENR once the Community Resource Management Framework (CRMF) and Five Year Work Plan (FYWP) of the PO was being approved and affirmed.

1.1 The Commodity or Product

Rattan thrives well in forested areas under canopy of large trees. The branches of trees serve as support because this is a thorny climbing palm sometimes growing to a length of 20-25 meters. When mature, the poles are gathered and are generally used in the manufacture of baskets, chairs, and other furniture for sale locally and abroad. There are plenty of Rattan poles with varied sizes ranging from less than 2 cm up to 3 cm depending upon the sizes. If given a Resources Use Permit, the economic value of the product will be gained and will provide sustainable livelihood and income for the organization while the government will accrue revenues from the charges and fees. Jobs will be created in the manufacturing process and marketing.

1.2 Methods of Harvesting/Gathering of Rattan

The usual procedure of harvesting Rattan is the manual method. The use of machinery or equipment is not required. The first stage is cutting the stem and debarking then pulling down to the ground. It will be cut into standard length for two (2) cm and larger poles, 2 meters long while for smaller sizes, it depends on the market requirement. Rattan poles are usually cut by the gatherers, who is actually go into the forest, cut the rattan, then bundled and bring it down from the mountain to the stockyard.

The gatherers paid according to the number of pieces of rattan brought to the stockyard. The price depends upon the species, diameter and length. However, harvesting of poles may vary depending on the climatic conditions, soil type, canopy opening and spacing.

Harvesting Rattan in the Philippines is generally done during the dry season. From late May to November or December, rattan gathering slows down or even stops except for gatherers who do not have other source of livelihood.

Before shipping, the poles will be sun dried or cured to prevent fungi attack which causes discoloration. Culms shorter than five (5) meters will not allowed to be cut. Moreover, it has no economic value.

Based on the inventory conducted by personnel of DENR-CENRO Quezon within the CBFM area of TMPA various species of Rattan abounds such as Palasan pula, Culape, Bogtong, Labsikan and Limuran. While, Abuan, Arorog, Sic-sic, Sika, Gatasan and Tumalin on the small sizes are very abundant.

1.3 Environmental Impact

The harvesting of Rattan does not pose any environmental hazard. No machinery or chemicals are involved in the operation. Moreover, cutting of immature poles is not economically feasible and therefore, sustainability is ensured. Cutting of trees is not allowed. Debris and waste materials will be contained in a certain place so as not clog or contaminate rivers and creeks.

1.4 Area of Operation

The rattan plantation is located within the CBFMA area of Tagbisay Multi-Purpose Association (TMPA) scattered particularly in Barangay Dumanguena, Narra, Palawan.

1.5 Proposed Activities on Project Management and Marketing

Rattan gatherers shall be under direct supervision of the PO who shall keep a record of quantity delivered by each individual. A bodega or storage house shall be constructed for stocking so that the collected Rattan will not be exposed to the rain. The PO shall make a record the quality and quantity of Rattan brought to him/her by the gatherer that will serve to determine the amount of money to be paid to each gatherer. The Treasurer of the PO shall receive payment from the buyer and issue official receipt. The Officer of PO thru the President shall be responsible to transact buyers and shall determine the optimum price most and advantageous to the association and gatherers on cash basis.

Currently, there are several buyers of Rattan in Narra, Palawan and Puerto Princesa City, Palawan. All forest charges and local regulatory fees will be paid and corresponding transport documents from the DENR shall be secured first before the transport of Rattan from Bodega to any point. Shipment will be done at least monthly or depending on the availability of stock.

A royalty fee of one peso (PHP 1.00) shall be retained to the PO for every pole of Rattan which will go to General Fund of the association and must be deposited in the Bank Account. The General Assembly will decide where to use the accumulated fund at year end in accordance with the approved plan or activities.

1.6 Sustainability and Continuity of the Project

Records should be intact for transparency, control and monitoring purposes. Whenever a problem or issues arise, the officer should convene to resolve the matter. If they cannot resolve the issue among themselves, the assigned DENR CBFM-Desk Officer shall mediate or intervene. The renewal of Resource Use Permit for Rattan resources will be done annually before its expiration to ensure continuity of the enterprise.

To ensure the sustainability and continuity of the project the PO prepared the projected income statements for one (1) year operation of rattan gathering and trading (*see attached Table No.*).

RATTAN HARVESTING PLAN

I. BACKGROUND

The name 'Rattan' is derived from Malayan word 'rotan' which means climbing palm. Rattan is a multi-purpose plant resource with long tough slender stems found mostly in the tropical rainforests, and has a high economic value which can be considered as a material with high potential in the construction industry.

Rattans are naturally found in the Philippine dipterocarp forests and are distributed throughout the country.

Local uses of rattans include the production of mats, baskets, fish traps, dyes, and medicines, while for the international market, rattans are mostly used in the production of cane furniture.

II. RATTAN UTILIZATION

The utilization of forest products is existing within the CBFM area is one of the privileges granted to the POs. The Resource Use Permit (RUP) is required to harvest some forest products found therein in a sustainable manner. Rattan harvesting is one of the promising enterprise which the PO could resort. The demand of products made from Rattan is very much in demand locally and abroad. It will create jobs not only in the community but also in the manufacturing and handling process. However, proper inventory must be done to ensure that the given quota does not exhaust yield or to prevent over harvesting of the resource. Moreover, it should be in accordance with Resource Use Permit and subject to proper monitoring by the DENR once the Community Resource Management Framework (CRMF) and Five Year Work Plan (FYWP) of the PO was being approved and affirmed.

1.1 The Commodity or Product

Rattan thrives well in forested areas under canopy of large trees. The branches of trees serve as support because this is a thorny climbing palm sometimes growing to a length of 20-25 meters. When mature, the poles are gathered and are generally used in the manufacture of baskets, chairs, and other furniture for sale locally and abroad. There are plenty of Rattan poles with varied sizes ranging from less than 2 cm up to 3 cm depending upon the sizes. If given a Resources Use Permit, the economic value of the product will be gained and will provide sustainable livelihood and income for the organization while the government will accrue revenues from the charges and fees. Jobs will be created in the manufacturing process and marketing.

1.2 Methods of Harvesting/Gathering of Rattan

The usual procedure of harvesting Rattan is the manual method. The use of machinery or equipment is not required. The first stage is cutting the stem and debarking then pulling down to the ground. It will be cut into standard length for two (2) cm and larger poles, 2 meters long while for smaller sizes, it depends on the market requirement. Rattan poles are usually cut by the gatherers, who is actually go into the forest, cut the rattan, then bundled and bring it down from the mountain to the stockyard.

The gatherers paid according to the number of pieces of rattan brought to the stockyard. The price depends upon the species, diameter and length. However, harvesting of poles may vary depending on the climatic conditions, soil type, canopy opening and spacing.

Harvesting Rattan in the Philippines is generally done during the dry season. From late May to November or December, rattan gathering slows down or even stops except for gatherers who do not have other source of livelihood.

Before shipping, the poles will be sun dried or cured to prevent fungi attack which causes discoloration. Culms shorter than five (5) meters will not allowed to be cut. Moreover, it has no economic value.

Based on the inventory conducted by personnel of DENR-CENRO Quezon within the CBFM area of TMPA various species of Rattan abounds such as Palasan pula, Culape, Bogtong, Labsikan and Limuran. While, Abuan, Arorog, Sic-sic, Sika, Gatasan and Tumalin on the small sizes are very abundant.

1.3 Environmental Impact

The harvesting of Rattan does not pose any environmental hazard. No machinery or chemicals are involved in the operation. Moreover, cutting of immature poles is not economically feasible and therefore, sustainability is ensured. Cutting of trees is not allowed. Debris and waste materials will be contained in a certain place so as not clog or contaminate rivers and creeks.

1.4 Area of Operation

The rattan plantation is located within the CBFMA area of Tagbisay Multi-Purpose Association (TMPA) scattered particularly in Barangay Dumanguena, Narra, Palawan.

1.5 Proposed Activities on Project Management and Marketing

Rattan gatherers shall be under direct supervision of the PO who shall keep a record of quantity delivered by each individual. A bodega or storage house shall be constructed for stocking so that the collected Rattan will not be exposed to the rain. The PO shall make a record the quality and quantity of Rattan brought to him/her by the gatherer that will serve to determine the amount of money to be paid to each gatherer. The Treasurer of the PO shall receive payment from the buyer and issue official receipt. The Officer of PO thru the President shall be responsible to transact buyers and shall determine the optimum price most and advantageous to the association and gatherers on cash basis.

Currently, there are several buyers of Rattan in Narra, Palawan and Puerto Princesa City, Palawan. All forest charges and local regulatory fees will be paid and corresponding transport documents from the DENR shall be secured first before the transport of Rattan from Bodega to any point. Shipment will be done at least monthly or depending on the availability of stock.

A royalty fee of one peso (PHP 1.00) shall be retained to the PO for every pole of Rattan which will go to General Fund of the association and must be deposited in the Bank Account. The General Assembly will decide where to use the accumulated fund at year end in accordance with the approved plan or activities.

1.6 Sustainability and Continuity of the Project

Records should be intact for transparency, control and monitoring purposes. Whenever a problem or issues arise, the officer should convene to resolve the matter. If they cannot resolve the issue among themselves, the assigned DENR CBFM-Desk Officer shall mediate or intervene. The renewal of Resource Use Permit for Rattan resources will be done annually before its expiration to ensure continuity of the enterprise.

To ensure the sustainability and continuity of the project the PO prepared the projected income statements for one (1) year operation of rattan gathering and trading (*see attached Table No.*).

**RESOLUTION PERTAINING TO THE BENEFIT SHARING ON THE ALMACIGA RESIN
AND RATTAN WITHIN THE CBFM AREA OF TAGBISAY MULTI-PURPOSE ASSOCIATION
(TMPA) LOCATED AT BARANGAY DUMANGUENA, NARRA, PALAWAN**

The Board of Directors and Officers conducted an emergency meeting on November 4, 2021, 2 o'clock PM at So. Boong, Barangay Dumanguena, Narra, Palawan discussed the benefit sharing.

WHEREAS, the Almaciga resin and rattan to be harvested within the CBFM area of TMPA are subject to benefit sharing scheme.

WHEREAS, the five percent (5%) of the total cost of the harvested products within the CBFM area will be remitted to the association and the remaining ninety five percent (95%) is entitled to the legitimate owner whether it's member or non-member.

WHEREAS, the collected five percent (5%) is intended for nursery and plantation establishment for agroforestry, livelihood projects, payments of official necessary documents, bills, and all related financial needs of TMPA.

WHEREAS, the collection from the benefit sharing shall be included in the financial reports and will be reported during the General Assembly to purposely inform the members and officers of TMPA.

WHEREAS, during series of discussions, the Board of Directors agreed to attached this resolution to CRMF and FYWP for information and guidance.

NOW THEREFORE, upon motion raised by BOD Guillermo D. Pao, Jr. and seconded by all members present it was,

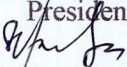

RESOLVED, as it is hereby agreed to attach the resolution to the Community Resource Management Framework (CRMF), 5 Year Work Plan and Resource Utilization Plan for information.

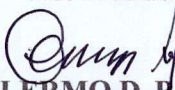

UNANIMOUSLY APPROVED:

I HEREBY CERTIFY, to the truth and corrections of the forgoing resolution.

Social/ PO and Community	Presence of NGP Rattan Project (100 has) CY 2018 - the area is in good climatic condition and enhanced vegetation	The PO is not the contractor of NGP	Generate income and employment	None	Misunderstanding between PO and Contractor	Continues maintenance
	Active PO members, DOLE Registered and capable of implementing different government projects within CBFMA	None	Qualified beneficiaries for Government Projects	Misunderstanding in financial management	None	Conduct meetings and trainings for PO
Economic/Livelihood/Enterprise Devt. to include harvesting and/or utilization of timber and non-timber products (individual, group/collective enterprise or livelihood)	Harvestable Products: Rattan, Buhô, Almaciga Resin and Honey	Weather condition and difficulty in securing permits	Provide additional source of income	Price of products vary depending on the supply; Improper tapping of almaciga; and Climatic condition (rainy season)	Lack of transparency on financial report	Training on proper tapping of Almaciga
Support Services (networking, Linkaging with Gas, OGAs, LGUs, Academe, Research, Finance & Resource Institutions) *Elem. School *ALS Building *Kalahi *Water system *Roads	Harmonious relationship between DENR, LGU, Tourism, Kalahi, DA and NGO	Delayed government projects	Provide technical and financial support and easy access of basic services	Delayed release of financial support	Weak electricity supply	Installation of High School and Additional Electrical Posts

Summary of Identified SWOC

CRMF COMPONENT	STRENGTHS	WEAKNESSES	OPPORTUNITIES	CHALLENGES		
				PROBLEMS	ISSUES	NEEDS
Environmental/Forestland/ Forest Resources	Presence of waterfalls for recreation/tourist attraction	Flow of the waterfalls is poor during summer and illegal fishing	Tourism development, Additional source of income, opportunities for employment and uplift the socio-economic status	Illegal Fishing	Doubts in management of waterfalls	IEC, Financial support, Construction of roads and bridges, Installation of solar bin, Trainings for PO members and Construction of cottages and comfort rooms
	Presence of rivers for recreation, potable water supply for domestic use and serves as a source of water for irrigation	Poor river flow during summer and illegal fishing	Tourism development, Additional source of income and opportunities for employment	Illegal Fishing	None	
	Restored wildlife habitat/ biodiversity	Illegal hunting and illegal trading	Tourist attraction	Poaching	Lack of monitoring	IEC, Monitoring and Enforcement
Social/ PO and Community	Presence of NGP Rattan Project (100 has) CY 2018 - the area is in good climatic condition and enhanced vegetation	The PO is not the contractor of NGP	Generate income and employment	None	Misunderstanding between PO and Contractor	Continues maintenance

**RESOLUTION PERTAINING TO THE BENEFIT SHARING ON THE MAHOGANY AND
GMELINA WITHIN THE CBFM AREA OF MARANAN UPLANDERS MARKETING
ASSOCIATION (MUMA) INC. LOCATED AT BARANGAY CALATEGAS, NARRA,
PALAWAN**

The Board of Directors and Officers conducted an emergency meeting on August 17, 2021, 2 o'clock PM at Barangay Calategas, Narra, Palawan discussed the benefit sharing.

WHEREAS, the Mahogany and Gmelina to be harvested within the CBFM area of MUMA, Inc. are subject to benefit sharing scheme.

WHEREAS, the five percent (5%) of the total cost of the harvested products within the CBFM area will be remitted to the association and the remaining ninety five percent (95%) is entitled to the legitimate owner whether it's member or non-member.

WHEREAS, the collected five percent (5%) is intended for nursery and plantation establishment for agroforestry, livelihood projects, payments of official necessary documents, bills, and all related financial needs of MUMA, Inc.

WHEREAS, the collection from the benefit sharing shall be included in the financial reports and will be reported during the General Assembly to purposely inform the members and officers of MUMA, Inc.

WHEREAS, during series of discussions, the Board of Directors agreed to attached this resolution to CRMF and FYWP for information and guidance.

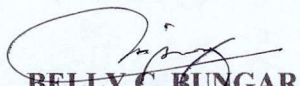

NOW THEREFORE, upon motion raised by BOD Sammy U. Arol and seconded by all members present it was,

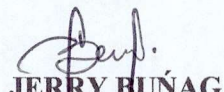

RESOLVED, as it is hereby agreed to attach the resolution to the Community Resource Management Framework (CRMF), 5 Year Work Plan and Resource Utilization Plan for information.

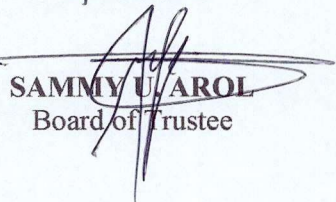

UNANIMOUSLY APPROVED:

I HEREBY CERTIFY, to the truth and corrections of the forgoing resolution.
