**MEMORANDUM**

**FOR : The PENR Officer**

**THRU : The Chief, Technical Services Division** *1/20/23*

**FROM : Forester I/NGP Coordinator**

**SUBJECT : REPORT ON THE ESTABLISHMENT OF FOREST NURSERY UNDER ENHANCED NATIONAL GREENING PROGRAM CY 2022 IN PENRO MARINDUQUE**

Respectfully submitting is the report on the establishment of forest nursery under Enhanced NGP CY 2022 in PENRO Marinduque. Please be informed that the construction of the said nursery was completed in December 2022 under the supervision of the NGP Field Personnel.

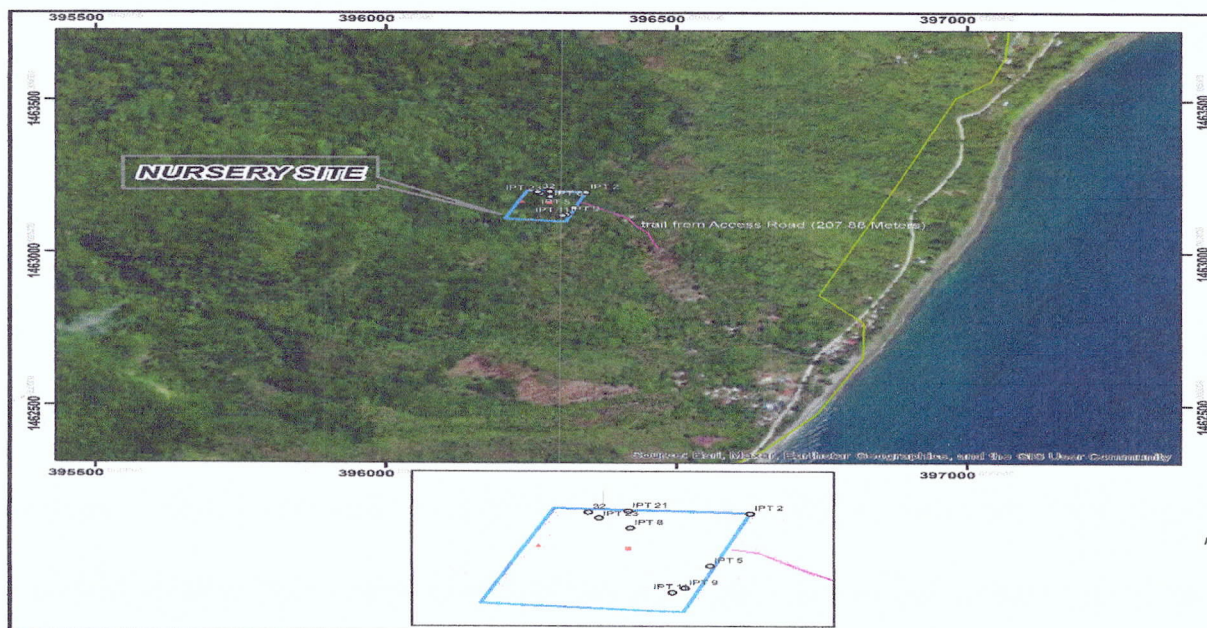

Prior to the establishment of forest nursery, series of area identification was conducted by the NGP personnel. Last year, recommendation for the nursery site was identified to be located in Brgy. Dampulan, Torrijos. This area was previously operational in 1990 to 2006, as mentioned by the former Nursery Project In-Charge, Mr. Pastor Villanueva. Facilities such bunk house, comfort room, pot beds, composting area and water facilities were constructed during that time. At present, the area is covered by trees, shrubs and vines. Also, the water pipes and fences are gone. However, upon conducting further investigation in the area in the early first quarter, the group found out that serious problem on stray animals and water supply will be encountered in the implementation of the project.

Another area identified was in Brgy. Bonliw, Torrijos near the Wildlife Rescue Center (WRC). This is located along the road so the accessibility is not an issue in transporting the seedlings. Plus factor as well is the caretaker in the WRC that can help in the nursery activities lessen the labor cost. The problem is that the large portion of the area is categorized as A & D, with claimants positioning in the area. That less than 1 hectare is located within the timberland. There is an issue on water shortage and flock of monkey who regularly goes down in the area hunting for food that may also cause damage/disturbances in the nursery.

Last identified area is in Brgy. Dampulan, Torrijos located in one of the corner of the Seedling Production Area/Individual Plus Trees (SPA/IPTs). Although, this is approximately 200 meters away from the main road, the area is enough for the establishment of nursery, with enough water supply and the source of planting materials is within the area. Plus factor is that the Science Aide can be utilized in the project since he/she is assigned in the SPA/IPTs.

With the situation identified, the NGP Unit sought to construct the forest nursery in Brgy. Dampulan, Torrijos (one of the corner of the SPA/IPTs) for it is more advantageous to the project. The decision was supported during the FDU meeting when most of the Section/Unit Chiefs also choose to construct the nursery in Brgy. Dampulan, Torrijos. Establishment of the said forest nursery is envisioned to produce seedling for distribution that will serve our client in the coming years.
